Catalog No. H-240FF  
Aug. 2015

## 37° Flared Tube Fittings for SAE J514 & ISO8434 Part2

## Flareless Tube Fitting for SAE J514

**HY-LOK CORPORATION**

© 2002, 2015 HY-LOK CORPORATION All rights reserved

## 37° Flared Tube Fittings

*This type of assembly ensures very high dependability.*

*The assembly is achieved by connecting the two parts together by means of a nut and a sleeve.*

### Main Characteristics

The assembly performs extremely well even under severe vibrations, pressure bursts, and thermal shocks.

On tightening, the sleeve ensures tube alignment with fitting axis, reduces mechanical strain on tube and decreases vibrations.

Fitting can be equally coupled to metric or inch-tubes.

The tube doesn't undergo distortion, remains constant and fluid pressure losses are negligible.

The system efficiency remains equally guaranteed after several disassemblies and assembly operations and individual replacement of any component.

### Material and Surface Protection

Fittings are normally made of steel and obtained from controlled bar-stock machining (straight fittings, nuts) or by hot or cold forming (shaped fittings, sleeves). Alternative materials such as brass, aluminium, stainless steel available upon request.

All carbon steel fittings but those to be brazed or welded-on tubes, are yellow zinc plated to a Min. thickness of 0.008 mm to comply with ASTM-B-117, UNI 5687 hot salt spray test method.

All threads are shock protected with plastic caps or plugs.

### Seals

All fittings requiring seals are supplied with O-Ring seals and washers.

### Flaring Operation

Tube flaring is carried out in two different ways ; single wall flare on thick wall tubes and double wall flare on thin wall tubes to reinforce same. Refer to table I and II for recommended values.

Table I - Metric Tubes.

T Tube O.D	D		S	D <sub>1</sub>		S <sub>1</sub>	R

## 37° Flared Tube Fittings

### Condition For A Correct Flaring

#### 1.0 Sawing process

- 1.1 Saw the tube at light angle. An angular offset of 0.5° in relation to the tube axis is permissible.
- 1.2 Do not use a tube cutter because this would cause formation of considerable burrs and an angular cut. Use sawing machine or device instead.

#### 2.0 Deburring process

- 2.1 After cleaning the tube, lightly deburr the tube ends at the inside and outside edge.

#### 3.0 Flaring process

- 3.1 Set the pressure in accordance with table.
- 3.2 Oil the flaring cone.
- 3.3 Insert the clamping grips corresponding to each outside diameter of the tube to the flaring device.
- 3.4 Slide the nut and sleeve onto the tube.
- 3.5 Insert the tube through the clamping grips up to the stopper and press against it.
- 3.6 Start with the flaring process.
- 3.7 Remove the flared tube including the clamping grips from the flaring device.

### Attention

The flare collar has to be square and concentric to the tube as well as to the flared body of 37°

Unequal flarings point to either defect tools or to manual operating mistakes.

The inside cone of the tube has to be clean, in case the surface is faulty, it has to be polished with a polishing mandrel.

## Assembly Instructions.

On the table below are shown the basic dimensions to calculate the overall length of tube assemblies, the actual dimension of fittings when assembled, the recommended assembly torques and working pressures.

# 37° Flared Tube Fittings

## Unified Straight Thread Ports (ISO 11926)

O-Ring sealing.

D3 diameter must be concentric to thread.  
Max. allowed error 0.13 mm.

Spot-faced surface must be square to thread in port.

Machining operation such as A and D1 is not required when port surface complies with requirements.

## Metric Parallel Thread Ports (ISO 6149)

O-Ring sealing.

D3 diameter must be concentric to thread.

Max. allowed error 0.13 mm.

Spot-faced surface must be square to thread in port.

Machining operation such as A and D1 is not required when port surface complies with requirements.

## 37° Flared Tube Fittings

### NPTF Thread Seal

The sealing action being achieved by the male and female tapered threads is therefore suitable to withstand high pressures.

If required, the sealing action can be enhanced with auxiliary compounds or tapes.

Division \ F (N)	1/8-27	1/4-18	3/8-18	1/2-14	3/4-14	1 1/2	1 1/4-1 1/2	1 1/2-1 1/2

For special applications, please contact our technical department.

# Assembly Procedure For Radially Adjustable Fittings.

ON SAE, METRIC ISO 6149

For adjustable positioning, O-ring and back-up washer should be in proper position on non-threaded section nearest to locknut. Lubrication of O-ring is recommended.

Screw fitting by hand into straight thread port until back-up washer contacts face of port.

To position fitting, unscrew up to one full turn then hold fitting in desired position and tighten locknut until back-up washer contacts face of port and force O-Ring within port cavity.

## 37° Flared Tube Fittings

### Assembly Procedure For Radially Adjustable Fittings.

ON SAE, METRIC ISO 6149, BSPP ISO 1179

For adjustable positioning, O-ring and back-up washer should be in proper position on non-threaded section nearest to locknut. Lubrication of O-ring is recommended.

Screw fitting by hand into straight thread port until check washer contacts face of port.

To position fitting, unscrew up to one full turn then hold fitting in desired position and tighten locknut until check washer is in contact with face of port.

### Special Fittings.

#### Coding Procedure

Fittings having thread combinations other than those listed in our catalogue can be ordered provided the following conditions are met :

- The geometric shape of any new fitting meets with those in the table below.
- The nominal dimension of the new fitting's ends are shown in our catalogue.
- The new fitting envelope dimensions will be those originated by the biggest thread.

#### Examples :

Should you wish a fitting in page 16 with following threads:  
 FUR (9/16-18) (3/4-16) this will be by encoded as : FUR 8T · 6T.

Example 1. Tube to Tube Connection

Option (O-Ring Seal)

FUR 8T · 6T · S316  
 1 2 5

FOUR 8T · 6T · S316  
 1 2 5

From page 37 you may order :  
 FOLMB (7/16-20) (3/4-16) by for encoded as FOLMB 4T · 08U.

Example 2. Tube to Tube Connection

Option (O-Ring Seal)

FOLMB 4T · 08U · S316  
 1 2 3 5

FOOLMB 4T · 08U · S316  
 1 2 3 5

From page 39 you may order :  
 FORTM · (7/8-14) (1 1/16-12) (1 1/16-12) by for encoded as FORTM 10T 12T · 12U.

Example 3. Tube to Tube Connection

Option (O-Ring Seal)

FORTM 10T12T · 12U · S316  
 1 2 3 5

FOORTM 10T12T · 12U · S316  
 1 2 3 5

Metric Tube

Tube O.D	4mm	6mm	8mm	.....	38mm	42mm
Identifier	4M	6M	8M	.....	38M	42M

### Thread Designator

Pipe Thread

Nomial Size	1/8	1/4	3/8	1/2	3/4	1	1-1/4	1-1/2
Identifier	01	02	03	04	06	08	10	12

Unified Thred

Size	7/16	9/16	3/4	7/8	1-5/16	1-5/16	1-5/8
Identifier	04	06	08	10	12	16	20

Thread Symbol

Size	Symbol	Specification
Taper Thread	R	BS 21 (BSPT), ISO 7/1
	N	ASME / ANSI B1. 20. 1 (NPT)
Parallel Thread	G	BS 2779 (BSPP), ISO 228/1
	U	ASME B1.1 (Unified)

### Material designator

Material	Stainless Steel	Carbon Steel	Brass
Identifier	S316 / 316L	STEL	BRAS

**EZY MAT - II** Portable flaring machine

Overall dimensions : 400 x 400 x 230. Weight : 50 Kg.

Flaring device

Pressure switch

Clamping grip

**Clamping grips for EZY MAT - II**

Tube O.D (mm.)	Part No.	Tube O.D (in.)	Part No.
6	M-FG06	1/4	M-FG04T
8	M-FG08	5/16	M-FG05T
10	M-FG10	3/8	M-FG06T
12	M-FG12	1/2	M-FG08T
14	M-FG14		
15	M-FG15		
16	M-FG16	5/8	M-FG10T
18	M-FG18		
20	M-FG20	3/4	M-FG12T
22	M-FG22	7/8	M-FG14T
25	M-FG25	1	M-FG16T
28	M-FG28		
30	M-FG30		
32	M-FG32	1-1/4	M-FG20T
35	M-FG35		
38	M-FG38	1-1/2	M-FG24T
42	M-FG42		

Benefit :

- Very easy operating.
- Ensure Constant quality.
- Quick flaring time.

Caution!

Do not actuate the flaring cone without first inserting the tube.

# SAE J514 Flareless Tube Fittings

The basic design of these fittings is derived from existing military standards.

## Design and Construction

The three components of the Flareless Tube fitting are designed and manufactured to produce a high pressure, leak-free joint upon proper assembly.

## Typical Material Specification

Material	Bar Stock	Forging
Stainless Steel Type 316	ASTM A479	ASTM A182
Brass	JIS C3604BD	JIS C3771BE
Carbon Steel	JIS S20C	JIS S20C

Details of Flareless Hydraulic Tube Fitting Assemblies

## Assembly Instructions for Hydraulic Flareless Tube Fittings.

These instructions apply to the assembly of hydraulic tube fittings of the flareless type.

The following instructions should be used to assure proper make-up of the fitting when assembled since the fitting depends on securing the sleeve to the tube by the cutting action of the sleeve into the tube.

1. Cut tube square and burr inside and outside corner (not excessive).
2. Assemble fitting by sliding nut over tubing with open end out.  
Slide sleeve on tubing with cutting edge out, the large head end should be inside of the nut.  
Lubricate the Sleeve and the threads on the body and nut with oil or petrolatum. Insert tube into fitting.
3. Be sure of tubing bottoms into the fitting, and tighten the nut until the sleeve just grips the tube.  
With a little experience, the mechanic can determine this point by feel.  
If the fittings are bench assembled, the gripping action can be determined by rotating the tube by hand as the nut is drawn down. When the tube can no longer be turned by hand, the sleeve has started to grip the tube.
4. After the sleeve grips the tube, tighten the nut one full turn.  
This may vary slightly with different tubing materials, but for general practice, it is a good rule for the mechanic to follow.
5. The fittings can now be disassembled for inspection.

the pilot at the end of the sleeve should be contacting or be within 0.038 mm (0.0015 in) of the tube for hard material or not more than 0.13 mm (0.005 in) on soft material. See Figure 3 for further detail.

This is an indication that the cutting edge has performed its function and has taken a secure bite in the tube. The sleeve should be slightly sprung or arched.

the rounded or lead edge should show a good seat in the fitting, and the head or shoulder end should be collapsed tight against the tube. The sleeve should have no end movement; however, the sleeve may be rotated on the tube due to spring back of the material. The performance of the fitting is not affected if the sleeve rotates.

6. In production, it may be preferable to use a threaded presetting tool to preform the sleeve onto the tubing.  
The presetting tool is a counterpart of the fitting hardened to provide good wearing properties for repeated usage.  
When using the presetting tool, the assembly instructions are the same, as the presetting tool takes the place of the fitting.  
Care should be taken to keep the cam surface of the presetting tool free of defects since they would transfer themselves to the sleeve, which would result in improper seating when the fitting is installed.
7. In some installations, it may be necessary to use a mandrel to support the inside of the tube when setting the sleeve.  
This is only necessary when the tube wall is so thin or so soft that it will not resist the biting action of the sleeve without collapsing.  
The mandrel in this instance supports the tube and allows the sleeve to bite into the tube without deforming or collapsing.  
Because the use of a mandrel allows very little give in the tubing, the setting of the sleeve may be made with slightly fewer turns than described previously.

## Reassembly Instructions for Hydraulic Flareless Tube Fittings.

After disassembly of the fitting joint, the flareless fitting can be reassembled

by assembling the tube and sleeve into the socket of the fitting and threading the nut onto the fitting.

The operation of assembly up to the point at which the sleeve seats itself in the fitting can usually be accomplished by hand or with the use of a small wrench. If a wrench is required, only low torques are necessary to seat the sleeve.

When the sleeve is seated, an increase in the torque will be quite evident. When this point is reached, draw the nut up approximately 1/6 of a turn minimum, but not more than 1/3 of a turn, to complete the tightening operation.

# SAE J514 Flareless Tube Fittings

## Designation Part Number System

The symbols in the designation column on each page represent the shapes and sized of invidual fittings.

### Part Number Example

Example : 1

Example : 2

### Tube Designations

Tube O.D	1/4"	3/8"	1/2"	.....	1-1/2"	2"
Designation	4T	6T	8T	.....	24T	32T

### Pipe Thread Designations

Thread	1/8"	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"
Designation	01	02	03	04	06	08	10	12	16

### Thread Symbols

R : Taper Pipe Threads (PT JIS B0203, ISO 7/1)

G : Parallel Pipe Threads (PF JIS B0202, ISO 228/1)

N : American National Standard Taper Pipe Threads (NPT ASME B1.20.1)

### Material Indication System

Specify material part number suffix letter :

• **STEL** = Carbon Steel • **S316** = 316 Stainless Steel • **BRAS** = Brass

Example : 1 BMC8T · 03N · STEL  
Carbon Steel

Example : 2 BT · 8T · S316  
316 Stainless Steel

Example : 3 BU · 8T · BRAS  
Brass

### How to Order

1) When placing an order with us, be sure to specify the fittings with their symbols given in the designation column on each page.  
Example : BMC8T · 03N · STEL

2) For the fittings with different sizes

(1) represents a diameter larger than diameter (2), which is aligned with (1), and (3) is a diameter other than (1) and (2).

3) For fittings other than those mentioned in the catalog, specify the following details :

- Type of fluid to be applied
- Working Pressure
- Working Temperature
- Material (Carbon Steel, Stainless Steel, Brass.)
- Shape (Union, Tee, Elbow, etc.)
- Size (Up to 2"(50.8mm) O.D)
- Any other conditions in tubing

4) Gaskets mentioned in the catalog are not normally furnished for the fittings. If gaskets are required, these designation symbols shall be used to order.

5) The fittings specifications are sometimes subject to change due to continuous improvements of quality and performance.

### Special Fittings

If there is any possibility of question as to the fitting desired, particularly for special fitting configurations, it is suggested that a sketch be submitted with the fitting order.

# SAE J514 Flareless Tube Fittings

## Plug BP

SAE 080112 MS51890

LL\* - Fitting end to Rear of Plug

Part No.	Tube O.D D (in)	T Straight Thread Size	Width across flat		LL	l
			H			
BP - 2T	1/8	5/16 - 24	9.5		8.6	14.0
BP - 4T	1/4	7/16 - 20	14.2		9.1	18.5
BP - 5T	5/16	1/2 - 20	15.8		10.2	19.6
BP - 6T	3/8	9/16 - 18	17.4		10.7	20.3
BP - 8T	1/2	3/4 - 16	22.2		11.2	22.1
BP - 10T	5/8	7/8 - 14	25.4		11.9	24.9
BP - 12T	3/4	1 1/16 - 12	31.7		12.2	25.4
BP - 16T	1	1 5/16 - 12	38.1		14.7	27.4
BP - 20T	1 1/4	1 5/8 - 12	50.0		16.3	28.2

## Cap BCA

SAE 080109 MS51891

Part No.	Tube O.D D (in)	T Straight Thread Size	Width across flat		l
			h		
BCA - 2T	1/8	5/16 - 24	11.1		11.2
BCA - 4T	1/4	7/16 - 20	12.7		12.1
BCA - 5T	5/16	1/2 - 20	14.2		11.7
BCA - 6T	3/8	9/16 - 18	15.8		12.7
BCA - 8T	1/2	3/4 - 16	20.6		13.9
BCA - 10T	5/8	7/8 - 14	23.8		15.7
BCA - 12T	3/4	1 1/16 - 12	28.5		19.0
BCA - 16T	1	1 5/16 - 12	34.9		17.4

All dimensions are in millimeters unless otherwise specified. Dimensions are for reference only, subject to change.

Nut

**BN**

SAE 080110 MS51823

Sleeve

**BS**

SAE 080115B

Part No.	Tube O.D D (in)	T Straight Thread Size	Width across flat		L
			H		
BN - 2T	1/8	5/16 - 24	9.5		13.5
BN - 3T	3/16	3/8 - 24	11.1		15.5
BN - 4T	1/4	7/16 - 20	14.2		17.8
BN - 5T	5/16	1/2 - 20	15.8		18.3
